

MV Data Governance

VieraSchiavi · Uruguay

Data governance + collections, for the LATAM nobody serves.

Serious, in your team's own language, running on the client's own infrastructure. The big players sell expensive and in English; we come in through the mid-sized lender and SME — where the collections pain is concrete and the cycle is weeks, not quarters.

Stage: pre-revenue, pilot-ready **Model:** services-led + recurring **Date:** July 2026

01 THE PROBLEM

Data governance is broken for 95% of the region's companies.

The tools that exist solve a global bank's problem, not a Uruguayan lender's. And a company that governs its data badly, collects badly: data quality → recovery.

Expensive

Collibra, Alation, Informatica: enterprise budgets, dollar licenses an SME won't sign.

English-only and cloud

English UI and support, and sensitive data that has to leave for an external tenant — an instant security blocker.

Or “do it yourself”

Open-source (OpenMetadata) is free, but you have to assemble it, maintain it, and there's no Spanish support.

Nobody owns “governance + collections, in the local language, running on-prem, for LATAM's mid-market lenders/SMEs”.

Four fronts compete around the gap, none inside it. That unserved seam is the thesis.

FRONT	WHO LEADS	THEIR WEAK SPOT	OUR ANGLE
Data governance	Collibra, Purview, Informatica	expensive, English, cloud, enterprise	affordable, on-prem, trilingual, SME
Governance OSS	OpenMetadata	“assemble it yourself”, no ES support	finished product + implementation
Collections LATAM	Colektia, Moonflow	they collect, don't govern the data	we govern the data that drives recovery
Core banking UY	Bantotal (~70% of banking)	it's the core, doesn't play in SME	we don't fight it: alongside, mid-market

Three tiers. Each with a distinct job in the funnel.

FREE

Local demo

100% synthetic, no internet. The Trojan horse: the prospect tries it without asking security for permission. A real review said it “unblocked security approval for a frictionless pilot”.

PAID

Paid editions

US\$149 PC license (one-time) · US\$390/mo Professional · AI credits US\$9/39/149. Already chargeable via MercadoPago in USD.

INTERNAL

Owner edition

Full source + own server. Not a SKU: it's the vehicle to deliver implementations on each client's DB/ERP. That's where the margin is.

PRODUCT STATUS

242 tests · 46/46 self-check · trilingual · runs 100% local. The engine (catalog, quality, lineage, data contracts) is solid for pilots today. Online payments are already live.

Services-led: the project pays for today, the subscription builds tomorrow.

It's not “SaaS that sells itself”. We come in as the specialist who implements, charge the project upfront, and leave the software running as recurring revenue.

01

Local demo

Enters with no security friction. Generates the lead.

02

Project

Implementation on their DB/ERP. US\$3–8k upfront.

03

Attach

Professional stays running. US\$390/mo recurring.

04

Expansion

More modules, more areas, referral to the next lender.

WHY IT MATTERS

Charging upfront makes the business **cash-positive from month 1** — no valley of death. The **subscription attach** is what turns it from “an expensive consultant capped by hours” into an asset that grows while you sleep.

Net US\$86–146k over 18 months. Solo. Without burning capital.

US\$86–146k

CUMULATIVE NET · 18M

base, without / with ad spend

Month 1

CASH-POSITIVE FROM

in all 3 scenarios · projects charged upfront

US\$2.9–5.0k/mo

LIVE RECURRING @18M

subscriptions that scale

TRANSLATED TO INCOME

Base without ads ≈ **US\$4,800/mo** avg over 18m — more than double Uruguay's average IT salary (US\$2,300). The risk isn't cash: it's **closing the deals**.

Three futures, same scale, no inflation.

Cumulative net — WITHOUT ad spend

organic / referrals · USD cumulative

Cumulative net — WITH ad spend

+US\$400/mo in ads · USD cumulative

■ Pessimistic ■ Base (we plan here) ■ Optimistic — aspirational, already needs a team

Uruguay to validate. LATAM is the thesis. The world, the tailwind.

~120

 UY CORE ACCOUNTS

11 banks, ~35 lenders, 34 health co-ops, state-owned.
+850 large private firms (INE).

~8,400

 LATAM CORE ACCOUNTS

~70–80× UY by GDP. Real edge: trilingual and local.

US\$12–18bn

 GLOBAL TAM 2030

data governance growing ~19–22%/yr. The tailwind, not the target.

WHERE WE ENTER

Through the **mid-sized lender / credit administrator** — short cycle, clear recovery pain. **Not** the 11 banks (9–15 month cycle, and they'll ask for SOC 2/ISO). Uruguay validates; LATAM scales.

A content engine that feeds the funnel, with one real face.

~36 pieces/month, a real identity (Martín Viera), no fake personas or hype. Content doesn't sell on its own: it builds authority and brings leads to the demo, which closes with implementation.

TRACK A

Authority

LinkedIn + X. "Data governance and collections in plain terms." Builds the reputation that closes.

TRACK B · FOCUS

B2B product

Mini-demos on synthetic data, problem → insight → CTA, one-pagers. Leads from collections/risk managers.

TRACK C

Education channel

60–90s Shorts/Reels, own script and voice. Spanish-speaking reach, top of funnel.

HONESTY, NOT A FACELESS PROMISE

With **US\$400/mo** in ads (LATAM CPL US\$17–36) we buy ~10–18 B2B leads → ~0.5–1 extra client/mo, and a client leaves US\$3–8k. It pays for itself several times over **if the funnel converts**.

From selling it solo to having a team — hiring against recurring revenue, not against hope.

- **Year 1 — Solo.** You deliver everything. Capacity ceiling ~2 implementations/mo. Goal: 5–15 clients, US\$29–146k net. Zero hires, bank the cash.
- **Hiring trigger.** Only when (a) recurring revenue covers a salary and (b) you're turning work away. A mid implementer in UY costs all-in ~US\$4,500/mo.
- **Year 2 — First hire.** In base/optimistic, recurring crosses US\$4,500/mo around month 10–12. You double delivery capacity.
- **Year 2–3 — Micro-agency (3–4).** You on sales + architecture, 2 implementers, 1 part-time on content. Only if recurring sustains payroll.

A plan without this slide is marketing. Here's what can sink it.

- **Bus factor 1.** Everything depends on one person. Mitigation: document, don't promise SLAs you can't sustain, hire as soon as recurring allows.
- **Connectors untested live.** Purview/Collibra/Tableau/MCP are built against the docs, never against a real tenant. Mitigation: first enterprise as a paid pilot with a “first integration” expectation.
- **Small UY market.** ~120 core accounts. LATAM isn't optional, it's the thesis; the language edge is the lever.
- **The optimistic case is aspirational.** 4 clients/mo solo at US\$8k is unrealistic without a team. We plan with base; we celebrate if it's optimistic.

11 THE ASK

It's not capital to survive. It's the decision to accelerate.

The business is cash-positive solo, from month 1. The real question is whether we compress 18 months into 9: hire the first implementer earlier and switch on the content/ads engine instead of waiting for organic to allow it.

PATH A · BOOTSTRAP

Solo, organic

Zero external capital. Base without ads: US\$86k net over 18m, recurring US\$2.9k/mo. Slower, 100% yours.

PATH B · ACCELERATE

Ads + early hire

~US\$30–50k would buy ~6 months of an implementer + ads. Base with ads targets US\$146k over 18m and recurring US\$5.0k/mo, sooner.

Concrete next step: a paid pilot with a mid-sized lender.
