

Serious data governance today is **expensive, English-only and cloud** . We bring it to LATAM's lenders and SMEs: **affordable, in the local language and running on their own infra** — and we govern the data that drives their collections.

We come in as the specialist who implements collections + governance on the client's DB/ERP (project charged upfront) and leave the software running (recurring US\$390/mo). The project pays for today; the subscription builds tomorrow.

NET 18M · BASE CASE US\$86–146k without / with ad spend	CAPITAL RISK Low cash-positive from month 1	RECURRING @18M US\$2.9–5.0k/mo live subscriptions, base	PRODUCT Pilot-ready 242 tests · 46/46 self-check

WHAT WE SELL

- Local demo (free) — 100% synthetic, no internet. The Trojan horse: the prospect tries it without asking security for permission.
- Paid editions — PC license US\$149 (one-time) · Professional US\$390/mo · AI credits US\$9/39/149. Already chargeable via MercadoPago in USD.
- Custom implementation — collections + governance on the client's DB/ERP. That's where the margin is and the door to the subscription.

WHY WE WIN (THE SEAM)

Nobody owns “**data governance + collections, for LATAM's mid-market lender/SME, in the local language, running on-prem**”. The enterprise players (Collibra, Purview, Informatica) are expensive and in English; the collections players (Colektia, Moonflow) don't govern the data; open-source is “do it yourself”. We enter through the **mid-sized lender / credit administrator** —short cycle, clear recovery pain— not the 11 banks (9–15 month cycle).

MARKET

Uruguay ~120 core accounts · validate	LATAM ~8,400 core accounts · scale	Global TAM US\$12–18bn by 2030 · +19–22%/yr

NET PROFITABILITY — BASE CASE (USD)

HORIZON	6 M	12 M	18 M	RECURR.
Base · no ads	16,386	44,770	86,241	2,875/mo
Base · with ads	29,171	77,454	146,294	4,998/mo
Pessimistic · no ads	5,691	15,336	29,288	1,100/mo
Optimistic · with ads	72,804	192,089	361,144	10,235/mo

Net after payment fee (~5%), infra and ~20% effective tax; before owner's draw (in solo phase, the net **is** your income). Plan with the **base case**; the optimistic case (4 clients/mo solo at US\$8k) is aspirational.

THE NUMBER THAT CHANGES EVERYTHING

Cash-positive from month 1 in all three scenarios: projects are charged upfront, so there's no “valley of death” and no need for capital. The risk isn't running out of cash — it's not closing the deals.

STATUS & WHAT'S MISSING

Solid engine	Payments live	Trilingual
Connectors untested on a real tenant	0 clients yet	
No SOC 2 / ISO	Bus factor 1	

The next step: a paid pilot with a mid-sized lender.

Frictionless local demo → implementation project → software running. We don't need capital to start; we do to **compress 18 months into 9**.

Methodology. Prices: real, from the repository. Market, competition, costs and ads: researched against official/public sources (BCU, INE, MSP, CUTI/BPS, Grand View) on 2026-07-20, marking verified vs. estimated. Financial model is proprietary and transparent; full assumptions in the business plan. Projection figures = planning scenarios, not guarantees. Demo on 100% synthetic data.
